When I was a child, I did not know what I want to become and what to do in life. Now I think it is a problem for many children and teenagers. It seems to you that there are a lot of attractive professions, interesting and exciting ones. You are eager to try them all... I remember my desire was to be a gymnastics coach, a journalist, an interpreter and even a teacher. The last is not spontaneous as my mother and grandmother are school teachers. How can I understand at last what I want and find my right way in choosing a career?

One day I open my e-mail and found a letter to me. It was an invitation from a special physics school to come to Dolgoprudniy (Moscow region) to take part in the Science session. The event was organized by the Moscow Institute of Physics and Technology. At the first time I was in a bit shock, then a great feeling of joy and pride came to me. My family was the first that I share my ideas. My relatives supported me as they also thought it was a good chance to learn a lot of new things and check up my mental abilities in engineering science. Moreover, it was a wonderful possibility to communicate with scientist and professors of the Institute.

All ten days that I was staying there were full of bright emotions and a scientific atmosphere. I tried to analyze the Olympiad tasks, attended the lectures of Nobel Prize laureates and to participate in the workshops along with the students. All this has led me to a huge desire to learn Physics at advanced level.

While I was going back home by train, I realized that this is right that I want to do all my future life. It became my dream. How I was surprised when my teacher told me that I was one of twenty-five who had won the complex

Olympiad. So there's a place for miracle. My dream came true so fast! It was only 2 days to pack the suitcase...

Now it was an IT-schooling in the frame of All-Russian educational project "Science in the regions". So, I was the most experienced in the group from Stary Oskol. We lived in a campus like a real students! It was an unforgettable two-week trip when we were far from our families. We studied at the Lyceum mastering our knowledge in IT-technology, Chemistry and Biology. I became confirmed in my desire to connect my life with IT-science. It is one of the most fashionable and prestigious professions of today. Although computers came into our life only in the 1960s they quickly gained the field of the contemporary society having become its indispensable part. Today our life is entirely connected with computers. With the help of computers people can do a lot of wonderful things from controlling spaceship, participating in virtual conferences up to buying everything you want. New programmes and approaches are needed all the time to meet the increasing demands of the time.

That was a fantastic month right before the New Year that shook my inner world. Now I am sure you need to be careful about choosing a profession because you should admire what you are doing and be willing to sacrifice for the profession. As they say "The best part of living is loving and giving".
